

The image shows a code editor window with a dark theme. The menu bar at the top includes File, Edit, Selection, View, Go, Run, Terminal, and Help. A search bar is located to the right of the menu. The file explorer on the left shows a project structure with a folder named 'Task.py'. The main editor area displays a Python script. The script starts with a series of input statements to collect personal information: name, age, address, contact number, course name, degree, email, gender, score, date of birth, and domain. These inputs are then passed to a function named 'bio_data', which prints each piece of data with a label. Finally, the 'bio_data' function is called with the collected inputs. The status bar at the bottom indicates the current position (Ln 1, Col 1), the number of spaces (4), the encoding (UTF-8), the line ending (CRLF), and the Python version (3.14.6).
