

The image shows a code editor window with a dark theme. The title bar at the top includes standard window controls and a search bar. The editor displays a Python file named 'Day_4_Assignments.py'. The code is organized into sections: 'First task' for string operations, 'Second task' for string manipulation, 'List tasks' for list operations, and 'Sorting and reversing' for list sorting and reversal. The code uses various string methods like upper(), lower(), capitalize(), count(), index(), replace(), split(), and join(), as well as list methods like append(), extend(), insert(), sort(), and reverse(). The status bar at the bottom indicates the current line and column (Ln 39, Col 33) and the file encoding (UTF-8).

```
D:\Backend > Python > Day_4 > Day_4_Assignments.py > ...
1  # First task
2
3  str1 = "python"
4  print("Upper case is ",str1.upper())
5  print("Lower case is ",str1.lower())
6  print("Capitalize ",str1.capitalize())
7  print("Count of p is ",str1.count("p"))
8  print("Index of p is ",str1.index("p"))
9
10 # Second task
11 sentence = "java is easy to learn"
12 print("The sentence ---->",sentence)
13 sentence = sentence.replace("java","python")
14 print("Replaced sentence ---->",sentence)
15 s1 = sentence.split()
16 print("Splitted sentence ---->", s1 , "\n" "Type ---->",type(s1))
17 s2 = " ".join(s1)
18 print("Joined string ---->",s2, "\n" "Type ---->",type(s2))
19
20 # List tasks
21 name = ["Abi","Akash","Alex"]
22 print("List ---->",name)
23 print("First element ---->",name[0])
24 print("Sliced name ---->",name[1:2])
25 name.append("Priya")
26 print("List after appending a name ---->", name)
27 name.extend(["Ajay","Ajith"])
28 print("List after extend ---->",name)
29 name.insert(1,"Jack")
30 print("List after insertion ---->",name)
31
32 # Sorting and reversing
33
34 num = [10,7,2,1,18]
35 num.sort()
36 print("Sorted list ---->",num)
37
38 num.reverse()
39 print("Reversed list ---->",num)
